

- develop indicators and progress markers during the project formulation and implementation.
- Develop baseline and targets associated with their indicators and progress markers

Module 3: Methods and Means of Verification & Monitoring System

Key content of the module:

Session 3.1: Data collection: means and sources of verification

The session will give a general idea of:

- data collection and sampling methods
- different data collection methods, their definitions and the pro's and con's of their use.

Session 3.2: Mixed Methods

The session will give more details and develop an understanding of:

- how to use different data collection methods in combination
- the consequences of sequencing different data collection methods

Learning objectives:

- To develop an understanding of the use of a data collection strategy for the MKCF

Learning Outcomes:

By the end of module, participants would be able to:

- develop a data collection strategy using a mix of qualitative and quantitative data collection methods.

Session 3.3.: Most Significant change and Outcome Harvesting

The session will give more details and develop an understanding of:

- the Most Significant Change data collection technique

- The Outcome Harvesting data collection technique

Learning objective:

- Develop an understanding that the Most Significant Change technique is a great tool to collect qualitative information and stories from the ultimate beneficiaries, impact level, which can be used for reporting and project promotion.
- Develop an understanding of the outcome harvesting technique as a tool for joint development and identification of outcomes that have been achieved, outcome level.

Learning outcomes:

By the end of the module participants will be able to;

- Collect impact level data using the Most Significant Change technique
- Collect outcome level data using the Outcome Harvesting technique

Session 3.4.: Developing a monitoring system

The session will develop an initial level of understanding and give more details on

- the development of a monitoring system.
- The steps to be taken in the development of a monitoring system

Learning objective:

- Develop an understanding of “MONITORING SYSTEM”: What exactly is it?
- Able to identify the different steps, process and flow in a monitoring system

Learning outcomes of the module:

By the end of the module, participants will be able to:

- Discuss and design the various steps to develop a monitoring system
- Understand that the regional level MKCF monitoring system has its own needs and timings
- Be prepared to develop a monitoring system during phase 2 in the trajectory under guidance of the consultant.
