

Case Studies:

- Best practices from the government with traceability platform
- Best practices from food business operators with existing traceability system
- Learning Visit

Module 5 - Action planning

Action plans are the most important aspect of PROSAFE Regional Training Programs. Participants will share how they plan to implement the lessons learnt in their work leading to a demonstrable change either in the food control system or food establishments.

TARGET PARTICIPANTS

Food traceability tools are useful to food systems' competent authorities and businesses. In this regard, the training program is targeted at the public and private sector from CLMV. It is especially useful for government officials with food inspection and certification roles such as GMP, GAP, GHP and organic agriculture, as well as FBOs with existing or aiming for the aforementioned certifications.
